BIGGEST POLLUTERS AMONG CHIP PLANTS

The semiconductor industry released 1.4 million pounds of toxic pollutants into the air, water and land around the plants in 1995, the most recent data available from the Environmental Protection Agency's Toxics Release Inventory show. More than 50 industries released more toxic pollutants. Releases were one-eighth of what they were in 1988. Since 1995, companies have reduced emissions even further. Facilities that released the largest amounts of toxic pollutants, in pounds:

Micron Technology (Boise, Idaho) 69,854
NEC Electronics (Roseville, Calif.) 59,630
VLSI Technology (San Antonio) 49,701
Philips Electronics (Albuquerque) 46,729
Motorola (Phoenix) 37,709
Texas Instruments (Dallas) 34,305
Lucent Technologies (Reading, Pa.) 34,000
Motorola (Austin, Texas) 31,942
Motorola (Mesa, Ariz.) 31,818
Motorola (Austin, Texas) 31,310
